21 September 2021

Status report week 31 - Force Majeure Aurubis Stolberg after the flood damage v. 14.07.2021:

Dear valued business partner,

With reference to the press release dated 20th September 2021.

It is well known that the plant is well on the way to restarting with at least some production areas and limited capacity.

As things stand today, it will be possible from the beginning of November to start the production of strips in thickness of at least 0.6mm. Our hot dipped tinning line will also restart for the same product range. In this respect we will just be able to ship material as coils, unfortunately Conticoil or spooled material we are not yet able to produce.

The restart of production of the product group with a strip thickness less than 0.6mm is not yet in sight, as the repairs can only be completed at a later point in time. As soon as we have more information in this respect, we will of course communicate.

We also have good news from our wire division. Parts of the wire production are going to resume in mid-November. These are primarily products that have no intermediate annealing. Here too, we are limited in the delivery forms, as we can only ship on spools or coils.

For those production areas that are starting up again, orders will be handled according to the existing order confirmations. In this respect, there will be a detailed coordination with the relevant customers on the sales side.

We would like to point out that the Force Majeure declaration is still valid.

Yours sincerely,
Aurubis Stolberg GmbH & Co. KG

Udo Nöbel
